<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

Table 20: labour force by region<sup>1</sup> (thousands of persons)

<sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give the seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19. Source: The Labour Force, (71-001) D.B.S.

Table 25: not in the labour force by region<sup>1</sup> (thousands of persons)

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>3</sup>Includes miscellaneous manufacturing industries. <sup>4</sup>Includes also publishing and allied industries. <sup>5</sup>Includes also the storage and communication industries. <sup>1</sup>The data in Tables 28 to 35 are based on reports from employers usually employing 15 persons and over and covering the respondents' last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and domestic service. <sup>3</sup>Includes storage and communication. <sup>4</sup>Includes insurance and real estate. <sup>5</sup>Excludes public administration and defence and such community services as health and education.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. <sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

<sup>1</sup>These totals include all generating agencies producing over ten million kilowatt hours per year. <sup>2</sup>These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. <sup>3</sup>Less imports. <sup>4</sup>Total net generation less net exports. <sup>5</sup>Mainly the amount used in electric boilers. Source: Electric Power Statistics, (57-001), D.B.S.

Table 60: electric power available<sup>1</sup>, by provinces (million kilowatt hours)

Note: Components may not add to totals due to rounding. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field and processing plants less field flared and waste, Canadian sources only. <sup>4</sup>By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D. B. S.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene and tractor fuel. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>1</sup>These indexes are available for January, April and August only. <sup>2</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>3</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. <sup>4</sup>Barley No. 1 feed; hogs grade "B" alive. <sup>5</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. <sup>6</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>7</sup>Quotations refer to steers of all weights. <sup>8</sup>Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.

<sup>1</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.<sup>2</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.<sup>3</sup>Annual data are monthly averages of crop year. <sup>4</sup>Includes eggs for hatching.

Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.

<sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

\*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. <sup>1</sup>Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. <sup>2</sup>Companies licensed under the Small Loans Act and affiliated companies engaged in making personal loans. <sup>3</sup>Cash loans with no conditional sales contract but usually repaid in instalments. <sup>4</sup>Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. <sup>5</sup>Loans other than secured loans and mortgage loans.

<sup>6</sup>Figures for dates other than year-end are estimated on the basis of loans made by twelve companies. <sup>7</sup>Sum of instalment credit of clothing hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. <sup>8</sup>Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. <sup>9</sup>Amount owing to oil companies ex commercial accounts. <sup>10</sup>Excludes mortgage loans data available yearly only. <sup>11</sup>The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.

<sup>1</sup>Monthly averages for 1963 and 1964 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. <sup>3</sup>Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. <sup>4</sup>Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

<sup>1</sup>Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers. Excludes in transit passengers. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. <sup>1</sup>Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. <sup>2</sup>The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. <sup>3</sup>Total new settled-for ordinary sales in Canada. <sup>4</sup>Under new or amended contracts.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

### A NOTE TO USERS

#### *Revisions to Employment and Payroll Statistics, Tables 28 to 35:*

All series contained in these tables have been revised to the 1960 Standard Industrial Classification, with all indexes revised to a 1961=100 time base.

Historical revised annual and monthly statistics for the period January 1961-May 1965 inclusive are available in the D.B.S. publication "Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics Historical Series, January 1961-May 1965", (Catalogue No. 72-504). For the period June-December 1965, revised data are published in the January 1966 monthly publication "Employment and Weekly Wages and Salaries", (Catalogue No. 72-002) and "Manhours and Hourly Earnings", (Catalogue No. 72-003).

A second historical publication to be released later this year will contain revised statistics for the period 1957-1960 inclusive and a technical paper describing the revised series.

The seasonally adjusted counterparts, on the new bases, in Tables 28 and 29 and pages S-3 and S-4 will be published when available.

#### *Other Revisions to Data:*

The original and seasonally adjusted data on the National Accounts (Tables 7-14 inclusive and page S-9) have been revised commencing with the first quarter 1962.

The unadjusted and seasonally adjusted data on corporation profits by industry in Table 113 are revised starting with the first quarter 1962.

The original and seasonally adjusted series on labour income (Table 18) have been revised from January 1963 onwards, and the seasonally adjusted series on wages and salaries by industry and by province (Tables 17 and 18) are revised from January 1965.

**NATIONAL ACCOUNTS, INCOME AND EXPENDITURE**  
**FOURTH QUARTER AND PRELIMINARY ANNUAL**  
**1965**

**Introduction**

The momentum which has carried the Gross National Product to successive new high levels since 1961 continued through 1965, when a 9.7 per cent increase raised the current dollar value to \$52.0 billion. As the expansion continued and the economy moved close to a full utilization of resources, price increases were more evident than in the preceding years and a 3 per cent rise in price levels reduced the gain to 6.6 per cent in real terms. If agricultural income is excluded from GNP, the increase in 1965 of 9.6 per cent is somewhat less than the 10.2 per cent increase between 1963 and 1964.

The first quarter of the year witnessed an unusually rapid rate of increase as a surge in inventory accumulation, following the previous quarter's disruption of supplies due to strikes in the automobile industry, was coupled with increased demands in all other sectors, with the exception of housing. The rate of growth eased in the following quarters from the first quarter rate, but throughout the year all areas of demand continued strong with the exception of new housing construction where most of the recorded increase in value reflected increased prices. In the final quarter of the year Gross National Product gained 2 per cent to end the year at \$53.8 billion.

The year as a whole saw gains over a wide range of economic activity. The scene was perhaps dominated by the strength of investment in non-residential construction and machinery and equipment, which were 17 per cent above 1964 levels, with particular emphasis in the manufacturing industry and electric power, gas and water utilities. The capacity of the construction industry was strained during the year, for in addition to business construction, government outlays on new fixed capital rose steeply. These latter outlays are included in overall government expenditure on goods and services which rose by 11 per cent, the main impetus coming from the provincial and municipal governments. Personal consumption once again accounted for the major part of the gain in Gross National Product, as the increase of 8 per cent, buoyed by rapidly rising labour income and expansion of credit purchasing, contributed \$2.4 billion towards the total increase in Gross National Product of \$4.6 billion. The demand for goods and services increased at the same rate, although within goods, the relative strength of demand for durable goods was more pronounced, particularly for automobiles where sales continued to increase strongly for the fourth successive year.

Business investment in inventories, although easing off in each quarter, totalled \$905 million for the year, appreciably higher than 1964. However, the level of inventories and the overall rate of accumulation when viewed against the levels of production did not appear to be unduly high.

The pressures on Canadian production of the vigorous expansion in domestic demand were somewhat moderated as part of the demand was met by a sharp increase in imports, particularly towards the latter part of the year. The deficit on current account transactions with non-residents increased to \$1.1 billion in 1965 from \$0.4 billion, mainly as a result of a substantially lower growth in exports of goods combined with continued large increases in merchandise imports. Exports of goods continued to rise although at a less rapid pace than in 1964; the gains were notable however—when allowing for the substantial decline in wheat sales—particularly non-ferrous metals and automobiles and parts.

In response to the high level of demand labour income rose rapidly throughout the year to average 11 per cent above 1964. The increase was attributable to expanded employment opportunities and to wage rate increases in excess of those experienced in the previous year. Profits moved rather unevenly through the year to a new high, 8 per cent above 1964; however the fractional declines in the first and fourth quarters were in contrast to the uninterrupted gains recorded from the beginning of 1962.

As noted earlier, some acceleration of price increases was observed in 1965, as well as a broadening of the areas over which these increases were being experienced. In the consumer field, price increases in food and services were most significant, while price increases in construction appeared to be appreciably higher in non-residential work. Although price increases were more widespread in 1965 certain price reductions should be noted in the selling prices of the motor vehicle industry, petroleum refineries and sugar refineries.

The robustness of the Canadian economy has gone hand in hand with increasing employment and gains in productivity, and against a background of economic expansion in the United States unprecedented in the post-war period.

**GROSS NATIONAL PRODUCT ROSE BY 2 PER CENT  
IN THE FINAL QUARTER OF 1965**  
(SEASONALLY ADJUSTED, AT ANNUAL RATES)

**THE YEAR AS A WHOLE INCREASED  
BY 9.7 PER CENT OF WHICH PRICE INCREASES  
ACCOUNTED FOR ABOUT ONE THIRD**

INCREASES IN INVESTMENT IN NON-RESIDENTIAL CONSTRUCTION AND MACHINERY AND EQUIPMENT WERE ONE OF THE DOMINANT FACTORS OF THE YEAR. IN HOUSING, HOWEVER, MOST OF THE ADVANCE IN VALUE WAS DUE TO THE INCREASE IN PRICES. BUSINESS INVENTORIES WERE APPRECIABLY HIGHER THAN IN 1964

THE TOTAL DEFICIT ON CURRENT ACCOUNT INCREASED FROM \$0.4 BILLION IN 1964 TO \$1.1 BILLION IN 1965, AS AN INCREASED PORTION OF THE EXPANSION IN DEMAND WAS MET BY GREATLY INCREASED MERCHANDISE IMPORTS

## Components of Demand

### Consumer Expenditure

Total consumer expenditure on goods and services reached \$32.1 billion in the year 1965, an increase of 8 per cent over its 1964 value. The purchasing power to sustain this level came primarily from an 11 per cent growth in labour income, while consumer debt outstanding continued to expand at about the same rate as in prior years.

A 2 per cent rise in consumer prices cut into the real gains for the period. The price rise was most pronounced in the service sector which registered an almost 3 per cent increase for the year. A nearly 3 per cent increase in food prices was largely responsible for the increase in non-durable goods prices. New car prices together with used car prices declined about 1 per cent while total durable goods prices declined fractionally.

All major components of consumer expenditure shared in the advance of total consumer expenditure. The rate of growth was fractionally stronger than in the preceding year. The increase in services was 8 per cent, a continuation of the pronounced rate of increase of 1964. The outlays on goods advanced at a rate similar to the advance in outlays for services.

The value of durable goods purchased continued a steady advance as prices edged downwards. Sales of new and used cars rose over 14 per cent, as compared with a 12 per cent gain shown in strike-affected 1964. Most of the major components of durable goods showed increases, more noticeably in furniture and appliances and radios. Purchases of non-durable goods rose more than 7 per cent over 1964, with notable increases in several of the components; for example, food expenditures increased by almost 6 per cent, clothing by 6½ per cent, and tobacco and alcoholic beverages by 8 and 9 per cent respectively.

### Business Gross Fixed Capital Formation

Capital expenditures in 1965 amounted to \$10.4 billion, 14½ per cent higher than in the previous year. Non-residential construction and machinery and equipment outlays rose 18 and 17 per cent respectively, while housing rose less sharply, by 5 per cent. The pace of investment in business plant and equipment quickened noticeably in the second half of the year.

The strength in demand in 1965 for new capital spread to all major industrial groupings, but was particularly pronounced in industries manufacturing chemicals, transportation equipment, and in the paper and allied industries, in electric power and transportation utilities, and in financial and com-

mercial services, where the latter increase was partly related to preparations for the 1967 World's Fair. New construction project outlays ran about one-third higher in 1965 in manufacturing, electric power, gas and water utilities and in the private commercial and institutional service industries, while increased purchases of machinery and equipment were particularly heavy in railways and urban transit systems.

The distribution of capital spending has shifted to give greater emphasis to manufacturing in the past two years than was evident at the commencement of the current expansion, and in 1965 manufacturers' outlays were double those of 1961.

# Changes in Industrial Composition of Business Plant and Equipment Outlay

The value of residential building amounted to \$2.1 billion with a gain of 5 per cent over 1964 representing largely increased prices. Housing expenditures rose 2½ per cent in the first half of 1965 over the latter half of 1964 but were little changed between the first and second halves of 1965. The tightened supply of mortgage money in the latter part of 1965 contributed to a slowing down in the number of apartments started in the final months of the year. Housing starts in 1965 were

virtually unchanged at 166.6 thousand, with completions increasing slightly to 153.0 thousand; the number of dwellings under construction consequently increased and stood at a record 120.0 thousand at the year-end. The housing market was assisted by CMHC direct loans which helped to offset the decline in both conventional and NHA lending by institutions. Mortgage approvals in the last quarter of 1965 were considerably lower than the previous year's level.

| <b>Totals .....</b>                            | <b>132,860</b> | <b>152,061</b> | <b>149,679</b> | <b>- 1.6</b>               |

During 1965 as a result of the heavy construction program, pressures developed on construction wage and material costs. Costs rose by about 6 per cent in 1965 compared with increases of about 4 per cent in the preceding year.

Business capital spending plans for 1966, published in "Private and Public Investment in Canada—Outlook 1966", indicate a substantial increase in investment; thus the sector is expected to add to domestic demand and cost pressures. However, some Federal Government budgetary measures, announced in late March, were aimed at restraining the expenditures on capital.

#### Non-farm Business Inventories

The tempo of investment in business inventories accelerated in 1965, amounting to \$905 million as compared to \$516 million in 1964. Although this was by far the biggest stock accumulation during the current economic expansion, the accumulation in relation to the levels of production does not appear to be unduly high. Investment in manufacturing and retail trade was the major force of expansion, contributing about 50 and 28 per cent respectively of the total accumulation in 1965. The year 1965 has been noteworthy for the strength of durable goods. The quarterly pattern revealed that after a substantial accumulation in the first quarter of the current year, there was some slowing down in the rate of accumulation in the last three quarters of the year. The substantial build-up in the first quarter in part reflected unusually heavy restocking of automobiles

in dealers' hands as a result of a sizeable involuntary depletion in the previous quarter due to strikes in the automobile industry.

The strongest influence in the 1965 accumulation was provided by the investment in manufacturers' durable goods, with significant increases in the stocks of primary metal, metal fabricating, machinery, transportation, and electrical goods-producing industries. Among non-durables, the increase in chemicals was noticeable. An offsetting movement in the stocks of other non-durable goods-producing industries left on balance a very small accumulation. The ratio of stock-to-shipments throughout the year remained below the average of the current expansion and slipped noticeably at the year-end.

Almost all the increase in the rate of accumulation in the stocks of wholesale trade was accounted for by the durable lines, in particular in the industrial and transportation machinery and equipment group. The movements in the non-durables were mixed, leaving a very small accumulation. The stock-to-sales ratio for the year as a whole was below the average of the current expansion.

A considerable amount of accumulation was concentrated in the holdings of retail traders. Modest increases in stocks were registered in non-durable goods, whilst there was a sharp accumulation in durable goods, concentrated mainly in the hands of motor vehicle dealers. The stock-to-sales ratio throughout the year was above the average of the current expansion.

#### Exports and Imports of Goods and Services

During 1965 the deficit in Canada's external account jumped to \$1,141 million from \$412 million in 1964 on the National Accounts basis. The change of \$729 million resulted from a fall of \$599 million in the surplus on merchandise trade as the increased

demand for imports outpaced the growth in export sales, and a further deterioration of \$130 million in non-merchandise trade. About 80 per cent of the latter can be ascribed to higher deficits in the interest and dividend account and the freight and shipping account.

| 1965 .....                    | 8,737               | 8,636   | 101 | 2,419    | 3,661   | - 1,242 | - 1,141         |
| 1964-65 per cent change ..... | 6.0                 | 14.5    |     | 6.7      | 8.3     |         |                 |

Export gains were made in live animals, crude materials such as metal ores, fabricated materials including pulp and paper and metals, and such products as machinery and transportation (cars, trucks and parts) and communication equipment. After showing little gain in the first part of the year compared with the latter half of 1964, exports climbed 8 per cent in the second half of the year.

Domestic exports, on a Trade of Canada basis, were \$429 million higher in 1965 than in the previous year. A gain of \$568 million in United States' markets offset declines of \$25 and \$114 million in United Kingdom and other markets. Fabricated materials and end-products contributed 43 and 36 per

cent of gains made in the United States. A drop of \$214 million in the category "food, feed, beverages, and tobacco" accounted for the overall decline in exports to markets outside the United States and United Kingdom. Whereas shipments of wheat and flour under the first major contract with the Soviet Union were important throughout the first half of 1964, shipments on the second large contract began late in the third quarter of 1965.

Available import statistics suggest strength in Canadian demand for imported fabricated chemicals, metal and metal products, machinery, transportation and communication equipment and other equipment such as laboratory requirements and computers.

## The Government Sector

Total revenues of governments combined (excluding intergovernmental transfers) increased by \$1,676 million to a level of \$16,373 million, about 11½ per cent over the 1964 level of \$14,697 million. Total expenditures increased less sharply, by 9½ per cent above 1964 totals, to a level of \$16,127 million, resulting in a surplus of \$246 million (on a National Accounts basis) compared to a small deficit of \$21 million in 1964. The improvement in the overall position came entirely at the federal level. The increase in revenues was at a greater rate than the increase in expenditures and resulted in an increase in the surplus to \$568 million from \$296 million in 1964, making this the second year in a row to record a federal surplus. The deficit at the provincial-municipal level of \$322 million was little changed from 1964.

All components of government revenue increased over the year, reflecting the continued buoyancy and expansion of activity in the economy in 1965. The largest increases occurred in revenues from indirect taxes and personal direct taxes.

Total indirect tax revenue rose by approximately 12 per cent, with the federal government and the provincial-municipal governments sharing almost equally in the absolute increase. The major part of the gain at the federal level was in excise taxes, which rose 19 per cent compared to 14 per cent for all federal indirect taxes; this was in part a reflection of the final stage of the imposition of the higher excise tax on production equipment and building materials. Provincial revenues from gasoline and sales taxes rose by 11 per cent and 16 per cent respectively, partially caused by some upward revision in rates. The gain in property taxes, due to both increased rates and bases, accounts for most of the rise at the municipal level.

Total corporate and personal direct taxes reached a level of \$6,076 million, an increase of 12 per cent from 1964. Reflecting the sustained improvement in employment conditions and rising incomes, total revenue from federal and provincial personal income taxes was 13½ per cent higher than in 1964, even after allowing for a reduction of about 10 per cent in the federal personal income tax rates from July 1, 1965. The provincial share of personal income taxes increased markedly during the year, a reflection of the increased abatement under the terms of the Federal-Provincial Fiscal Arrangements Act.

Total expenditures of all levels of government (excluding intergovernmental transfers) advanced by approximately 10 per cent or \$1.4 billion in 1965, with most of the gain occurring at the provincial-municipal level. Outlays on goods and services which increased by 11 per cent were strongly reinforced by a 29 per cent or \$533 million increase in capital expenditure with four fifths of the increase occurring at the provincial-municipal level. Provincial-municipal expenditures on goods and services rose sharply by approximately 13 per cent. Federal outlays on goods and services rose by more than 7 per cent, which was accounted for by an increase of almost 14 per cent in non-defence goods and services and a decrease of 1 per cent in defence goods and services.

Transfer payments to persons (excluding interest on the public debt) showed a total increase of 9 per cent. The federal government recorded an increase of 3 per cent, but the increase at the provincial-municipal level was 15 per cent. The substantial increase by the provincial-municipal governments was caused by larger grants to hospitals and educational institutions.

## Price Movements

With prices advancing by nearly 3 per cent between 1964 and 1965, the increase of 9.7 per cent in the value of GNP was reduced to a gain of 6.6 per cent when expressed in real terms. The following table shows annual price changes for the major components of GNE over the past three years. From this table it is apparent that there has been a moderate increase in the rate of over-all price increase over the past two years.

In 1965 the price component of personal expenditure advanced by 2 per cent, as compared with 1.6 per cent in the preceding year. Prices associated with business gross fixed capital formation exhibited approximately the same rate of increase in both 1964 and 1965, while prices for both exports and imports showed a smaller increase in 1965 than in 1964.

Within personal expenditure, the various components showed somewhat diverse movements. Durable goods prices declined fractionally in 1965 as compared with a 1 per cent decline in 1964. Within 1965, the prices of new automobiles and appliances decreased by approximately one half of 1 per cent, while prices of furniture increased by 2 per cent. Food prices, increasing by about 2½ per cent largely as the result of greatly increased meat prices brought about by short supply conditions in the United States, dominated the movement of non-durable goods prices. Prices of non-food commodities continued to increase by slightly less than 1 per cent. Prices of services rose by close to 3 per cent in 1965, reflecting advances of 3½ per cent or over in all major components other than rents and communication-related services, both of which increased by about one half of 1 per cent.

| Gross National Expenditure .....                | 1.8  | 2.5   | 2.9   |

Prices associated with residential building showed somewhat less of an increase in 1965 than in 1964. This appeared to be associated with building material prices, wherein the price index of lumber and its products had increased by over 8 per cent in 1964, compared with 5 per cent in 1965, while prices of roofing materials, which had risen by about 6 per cent in 1964, fell by 3 per cent in 1965. The labour component of both the residential and non-residential price indexes increased by somewhat more in 1965 than the 4½ per cent increase recorded in 1964. Shifting expenditure patterns affected machinery and equipment prices both in 1964 and in 1965. Had a fixed pattern of expenditures been used to estimate price changes the increases in the price

of machinery and equipment would have been 3.3 per cent in 1964 and 2.9 per cent in 1965.

Within merchandise exports, price changes were somewhat diverse. The drop in the price of wheat early in 1965 was largely responsible for a 1½ per cent price decline in the food, feed, beverages and tobacco group. Both the crude materials inedible, and the end products inedible groups increased by a little over 1 per cent while the fabricated materials inedible group showed a gain of 2 per cent. Within the last-mentioned group, the price of newsprint showed only a fractional change, while certain metal prices, responding to world market conditions, showed significant increases.

The movement of merchandise import prices was again dominated by changes in the price of sugar, which declined by more than 50 per cent in 1965 relative to 1964. The fractional increase in the overall import price index resulted from moderate in-

creases in the crude materials inedible and the end products inedible groups, an increase of approximately 3 per cent in the fabricated materials group, and a decrease of over 16 per cent in the food, feed, beverages and tobacco group.

## **Income Flows**

### **Labour Income**

Wages, salaries, and supplementary labour income totalled \$26.0 billion for 1965 and were 11 per cent higher than in 1964. Labour income originating in the goods-producing industries advanced more rapidly than the service-producing group in 1965.

The rise in labour income resulted in part from the continued sharp increase in employment in non-agricultural industries, where expanded job opportunities more than absorbed new entries to the labour force, and the number of unemployed fell. Numbers in the labour force as a proportion of the population 14 and over rose in 1965 to a level not achieved since the late 1940's. In addition to the increased numbers employed, the year also witnessed an appreciable increase in average weekly wages and salaries.

Wages and salaries in the goods-producing industries rose 12½ per cent with the largest gain, 24 per cent, occurring in construction, where about ⅔ of the increase resulted from a higher volume of labour input. The mining industry advanced 13 per cent and the forestry and manufacturing groups each increased about 10½ per cent. Gains in mining, manufacturing and construction wage and salary payments were the largest recorded in the past decade.

Wages and salaries in the service-producing industries were about 10½ per cent above the 1964 total. The finance and service industries increased about 12½ per cent and wages and salaries in trade advanced 10½ per cent. Somewhat smaller increases were recorded in the transportation, communication and other utilities group, 8½ per cent, and in government non-military wages and salaries, 7½ per cent.

### **Corporation Profits**

Corporation profits (before taxes and before dividends paid to non-residents) reached a new record level of \$5.2 billion in 1965, and were 8 per cent higher than in 1964. Starting the year with a moderate first quarter (about level with the exceptionally high fourth quarter of 1964) profits continued to climb through the second and third quarters before levelling off in the fourth.

Profits in the manufacturing group rose about 7 per cent over last year due to the general strength evident in most industries. Of particular significance were the increases in food and beverages (8 per cent), and metals (15 per cent), the latter reflecting

the return to more stable production conditions in the transportation equipment industry. These movements were partly offset by increased costs in the wood and paper industries, the profits of each of which declined 15 per cent.

There was a 9 per cent rise in the profits of the transportation, storage and communication industry. The continued strength of consumer demand contributed to the 15 per cent increase in retail trade profits, while wholesale trade profits showed an upward movement of 10 per cent. The performance of banks and the improved revenues of insurance carriers resulted in a 9 per cent advance in the finance, insurance and real estate group. The profits of service industries continued to grow and increased 22.0 per cent, this rate being second only to that of 1962, the first full year of the current expansion.

The marginal decline in the profits of the mining, quarrying and oil wells group was due to the irregularly high level of foreign dividend receipts in 1964.

### **Investment Income**

Rents, interest and miscellaneous investment income increased by 9 per cent over 1964, one of the larger increases in recent years. This item was marked by an increase in the government component as the profits of government business enterprises and other investment income showed a notable rise. The increase was largest at the provincial level.

Among the other investment income items the rental income of persons showed mixed movements with residential rents declining, reflecting rising expenses, while the rental income of farms increased sharply.

### **Net Income of Non-farm Unincorporated Business**

Benefitting from strong second and third quarters, net income of non-farm unincorporated business in 1965 reached a level of \$2,877 million, 6 per cent above the 1964 figure. The largest gain, 7½ per cent, was in service industries which contributed more than half to the total increase in the net income of non-farm unincorporated business.

### **Accrued Net Income of Farm Operators**

Accrued net income of farm operators from farm production in 1965 was \$1,645 million, 12 per cent higher than in 1964 but slightly lower than in the bumper crop year 1963. Farm cash receipts, the

largest component of farm income, increased 8 per cent and farm operating expenses 5 per cent from the corresponding 1964 data. Both items attained new record levels.

A large part of the increase in the accrued net income of farm operators can be attributed to considerably higher grain production. The value of crop production in 1965 was estimated to have been

\$1,301 million, the third highest on record and close to 15 per cent above 1964. On the other hand, value of grain marketings in 1965 was smaller than in 1964.

Reflecting considerably higher receipts from sales of cattle, calves and hogs, livestock production increased 9 per cent above the 1964 level. Sales of potatoes, dairy products and eggs also increased.

<sup>1</sup> This adjustment takes account of the undistributed profits of the Canadian Wheat Board.

### Production by Industry

Gross domestic product less agriculture for the year 1965 was 6½ per cent above the level of the previous year, with manufacturing contributing over one third of this gain. Most major industry groupings showed increases well over their post-war average rates of growth. The exceptions were the primary industries and the public administration and defence

and the finance, insurance and real estate groups from among the service-producing industries. The largest year-to-year gains were recorded by durable manufacturing, electric power and gas utilities, and wholesale trade, all of which increased by about 10 per cent in 1965. Gains of about 8 per cent occurred in construction and transportation, while non-durable manufacturing and retail trade advanced by 5½ and 6 per cent respectively.

### The Fourth Quarter

#### Introduction

Gross National Product rose by 2 per cent in the fourth quarter to an annual rate of \$53.8 billion after allowing for seasonal factors. Prices rose 1 per cent in the final quarter of the year reducing the gain in real terms to about 1 per cent.

The gains in the quarter were marked by the similarity which they bore to the preceding quarter with the exception of imports and government expenditure, both of which at least doubled their rate of increase, and some acceleration in price increases. Total final purchases rose by \$2 billion at annual rates in both periods, and the rate of inventory investment slackened by close to \$150 million in each quarter.

The main contribution came from personal spending which registered a gain of 2½ per cent but a sizeable increase in business investment in plant and machinery also occurred, raising the annual rate in the fourth quarter well towards the anticipated level of outlays in 1966. The 8 per cent increase in machinery and equipment almost certainly contributed towards the deterioration in Canada's balance on current international transactions. A more than 6½ per cent increase in imports well outpaced export gains with a resultant widening in the seasonally adjusted deficit to an annual rate of \$1.5 billion from \$1.1 billion in the third quarter. Government demands on production rose by 3 per cent with the federal and provincial/municipal areas showing approximately similar increases.

On the income side, labour income and rent, interest and miscellaneous investment accounted for almost the total increase. While corporation profits, and both farm and non-farm unincorporated business income showed slight percentage declines, the dollar values of these components showed relatively little change between the third and fourth quarters. The stability in the indirect taxes less subsidies component was due to the fact that increases in indirect taxes were offset by an increase of a like amount in subsidies. Data on non-agricultural production in real terms by industry indicate that gains in the fourth quarter were quite widespread with all major industry groups contributing to the advance.

### Components of Expenditure

Total personal expenditure on goods and services, seasonally adjusted at annual rates, reached \$33.3 billion, an increase of  $2\frac{1}{2}$  per cent over the third quarter. However, about one third of this advance must be attributed to an upward movement in consumer prices. The increase in consumer expenditure was accompanied by a more than 3 per cent increase in labour income.

Expenditure on goods accounted for 61 per cent of total personal expenditure. The fourth quarter rise of about  $2\frac{1}{2}$  per cent in total outlays on goods was a less rapid expansion than in the third quarter as expenditure on new and used cars fell more than 3 per cent below the third quarter level; other durable goods expenditures were higher than in the third quarter.

Non-durable goods, which accounted for 48 per cent of total personal expenditure, advanced to a \$16.1 billion annual rate after a rise of  $3\frac{1}{2}$  per cent from the third quarter when the advance was only 2 per cent. Some of this advance is accounted for by higher food prices. The greatest increases in non-durable expenditures were recorded by heating fuel, electricity and gas expenditures which when taken together climbed about 5 per cent; by alcoholic beverage sales which advanced over 4 per cent; and by gas, oil and grease which when taken as a total rose by 4 per cent. Expenditure on these items accounted for about  $20\frac{1}{2}$  per cent of total non-durable purchases. On the other hand, tobacco expenditures fell 2 per cent in the fourth quarter after gaining  $2\frac{1}{2}$  per cent in the previous period.

During the fourth quarter, services advanced about 3 per cent to reach a seasonally adjusted annual rate of \$13.1 billion. Again the advance in real terms was somewhat dampened by generally advancing prices. For the fourth quarter the dollar advance was general throughout all the components of services.

Business fixed capital formation, including residential construction, rose by  $5\frac{1}{2}$  per cent from the third to the fourth quarter to reach an annual rate of \$11.3 billion after allowance for seasonal

factors. The estimated increase of some \$590 million was the result of strength in business demands for plant and equipment either to increase capacity or replace existing fixed assets.

The value of housing put in place was virtually unchanged. Housing starts fell from 171,500 to 154,200 at annual rates, while completions edged up slightly to 149,000. The sharp decline in starts in urban areas was mainly concentrated in apartment starts. Direct CMHC loans in support of the winter incentive program helped to offset reduced activity of institutional lenders in both NHA and conventional mortgages. The year end levels of mortgage loan approvals, lower by 20 to 30 per cent than a year earlier, foreshadowed a drop in 1966 starts.

Business outlays on building and engineering plant and equipment amounted to an annual rate of \$9.1 billion, some 7 per cent above the third quarter, with structures up  $5\frac{1}{2}$  and equipment up 8 per cent.

Investment in non-farm business inventories in the fourth quarter of 1965, at seasonally adjusted annual rates, was \$696 million as compared with \$1,108 million in the first quarter, \$980 million in the second quarter and \$836 million in the third quarter of 1965. The drop in the rate of accumulation in the fourth quarter was due to the reduced rate of stock building in retail and wholesale trade. Manufacturers were the largest contributors to the total accumulation in the fourth quarter and this demand for stocks towards the end of the period was in part reflected in the high level of merchandise imports.

Investment in manufacturers' stocks contributed 70 per cent to the total accumulation of business holdings. The considerable advance in the durables component formed the basis for this growth, with particular strength occurring in the primary metal, metal fabricating, machinery, and transportation industries. Offsetting movements in the non-durable goods producing industries left, on balance, a very small accumulation in this group.

Related information indicates that stock accumulation took place at all stages of production, most noticeably in goods-in-process. The ratio of stock-to-shipments was below the average of the current economic expansion. Continued advances in business investment and in consumer expenditures were reflected in a rising flow of new orders and shipments leaving the rate of increase in unfilled orders almost unchanged from the previous quarter.

Investment at the wholesale level showed a moderate accumulation. A considerable amount of build-up which occurred in durables, mainly in industrial and transportation equipment and supplies, and commercial, institutional and service equipment and supplies groups, was to some extent offset by a liquidation in the stocks of all non-durable goods. For the industry as a whole the stock-to-sales ratio was below the average of the current economic expansion.

Within retail trade, modest increases were recorded both in durables and non-durables. In the non-durables, offsetting movements resulted in a very small stock accumulation. In the durable goods a small liquidation in the stocks of the rest of durables was more than offset by a substantial build-up of stocks of motor vehicle dealers. The stock-to-sales ratio in the current quarter was above the average of the current economic expansion.

The deficit in the external account moved from a seasonally adjusted annual rate of \$1,076 million in the third quarter to \$1,504 million in the fourth. The change of \$428 million resulted from a turn-

round of \$304 million from surplus to deficit in merchandise trade augmenting a worsening by \$124 million in non-merchandise trade.

Discounting seasonality, export gains were made in aluminum, copper, iron, nickel, and zinc; in other materials such as crude petroleum, natural gas, asbestos, lumber, wood pulp and fertilizers; and in end products such as agricultural machinery. Declines were recorded in wheat clearances, fish and non-agricultural machinery. Data are not yet available to identify import commodity changes corrected for seasonal factors.

### Exports and Imports of Goods and Services

Seasonally adjusted at annual rates

|                                  | Goods               |         |       | Services |         |         | Current balance |
|----------------------------------|---------------------|---------|-------|----------|---------|---------|-----------------|
|                                  | Exports             | Imports | Net   | Exports  | Imports | Net     |                 |
|                                  | millions of dollars |         |       |          |         |         |                 |
| 1964—1Q .....                    | 7,864               | 7,448   | 416   | 2,228    | 3,372   | - 1,144 | - 728           |
| 2Q .....                         | 8,492               | 7,552   | 940   | 2,204    | 3,268   | - 1,064 | - 124           |
| 3Q .....                         | 8,524               | 7,524   | 1,000 | 2,240    | 3,372   | - 1,132 | - 132           |
| 4Q .....                         | 8,080               | 7,636   | 444   | 2,396    | 3,504   | - 1,108 | - 664           |
| 1965—1Q .....                    | 8,268               | 8,120   | 148   | 2,356    | 3,468   | - 1,112 | - 964           |
| 2Q .....                         | 8,552               | 8,312   | 240   | 2,420    | 3,680   | - 1,260 | - 1,020         |
| 3Q .....                         | 8,812               | 8,652   | 160   | 2,504    | 3,740   | - 1,236 | - 1,076         |
| 4Q .....                         | 9,316               | 9,460   | - 144 | 2,396    | 3,756   | - 1,360 | - 1,504         |
| 3rd to 4th 1965 (per cent) ..... | 5.7                 | 9.3     |       | - 4.3    | 0.4     |         |                 |

The worsening in services transactions was mainly concentrated in the travel account, the interest and dividend income account and, to a smaller degree, in the freight and shipping account.

#### Government Sector

Seasonally adjusted at annual rates, total revenues of all governments combined (excluding intergovernmental transfers) increased by almost 4 per cent from the third quarter to a level of \$17,152 million in the fourth quarter. All components showed increases of varying degree with the largest absolute increase occurring in indirect taxes and investment income.

Expenditures of all governments combined increased by 3 per cent, to a level of \$16,752 million in the fourth quarter of 1965. Almost half of the increase was accounted for by higher expenditures on goods and services by all governments. Subsidies increased substantially, the result of a large interim payment to the railways made during the quarter.

With revenues at the provincial-municipal level increasing more sharply than expenditures and with the surplus at the federal level remaining relatively

constant the surplus on a national accounts basis, of all governments combined, rose from a seasonally adjusted rate of \$244 to \$400 million between the third and fourth quarter of 1965.

#### Price Movements

One half of the two per cent gain in the value of GNP between the third and fourth quarters resulted from higher prices. With the exception of exports, prices of all major GNE components increased by more in the fourth quarter than they had in the third quarter. The following table shows quarter-to-quarter price changes for GNE and its components throughout the year 1965.

The price component of personal expenditure advanced by 0.7 per cent between the third and fourth quarters. As noted in the table, prices of food were largely responsible for the advance of 0.6 per cent in the price of goods. Prices of non-food commodities increased only fractionally, partly reflecting a continued slight decline in prices of durable goods. Service prices continued to advance by a little over one half of one per cent with rents again showing only a fractional increase.

# Implicit Price Indexes – Percentage Change from the Preceding Quarter, 1965

Seasonally adjusted

|  | 4th to<br>1st | 1st to<br>2nd | 2nd to<br>3rd | 3rd to<br>4th    |

| Gross National Expenditure .....       | 0.5           | 1.0           | 0.6           | 1.0              |

<sup>1</sup> Quarter-to-quarter price changes for this component cannot be measured with precision.

Preliminary data suggest that consumer prices advanced by close to 1½ per cent between the fourth quarter 1965 and the first quarter 1966. Much of this increase resulted from a significant increase in the prices of food.

Prices of the components of business gross fixed capital formation showed some acceleration in the fourth quarter, traceable mainly to pronounced advances in the labour component of the construction price indexes.

Prices of merchandise exports advanced by about one-half of one per cent during the quarter. There was little change in the price of fabricated materials inedible, crude products inedible, and of end products. However, prices of food, feed, beverages and tobacco advanced by 2 per cent, reflecting increases in the prices of wheat, tobacco and other foodstuffs.

## Income Flows

Seasonally adjusted labour income, at \$27.2 billion, rose about 3 per cent in the fourth quarter, a somewhat accelerated rate of increase from the third quarter, already high by reason of retroactive payments. Much the highest rate of increase occurred in the goods-producing industries, where a rise of about 5 per cent contrasts with one of nearly 2 per cent in the service-producing industries.

Among the goods-producing industries, the greatest rate of gain was in construction; the 11 per cent increase was the largest since the first quarter of 1956. Labour income in manufacturing advanced over 4 per cent in the fourth quarter, the largest increase since the fourth quarter of 1952.

The 2 per cent increase in seasonally adjusted labour income in the service-producing industries in the fourth quarter was considerably lower than the gain in the third when it had been unusually high because of retroactive payments. But for this factor, the rate of increase in the two quarters would have been much the same. There were gains in labour income in all the service industries except government service where it declined nearly 2 per cent, largely in reflection of retroactive payments in the third quarter.

Corporation profits in the fourth quarter 1965 dipped to a seasonally adjusted annual rate of \$5.3 billion, about 1 per cent below the preceding quarter. In the manufacturing group the paper, metals, and petroleum and coal industries displayed some weakness, outweighing the small gains within the group. Retail trade, and finance, insurance and real estate also declined. Increases were registered by transportation, storage and communication, and wholesale trade.

Rents, interest and miscellaneous investment income increased \$284 million or 8 per cent from the third to the fourth quarter. This unusually large increase can be attributed to the profits of government business enterprises which reflect that portion of the interim subsidy payments to railways received by the C.N.R.

Accrued net income of farm operators from farm production, seasonally adjusted at annual rates, declined 2 per cent from the third quarter, to \$1,740 million. Income from gain production decreased nearly 4 per cent, mainly due to a drop in the profits of the Canadian Wheat Board, and income from pro-

duction of livestock, notably cattle and calves, showed a similar decrease. Higher receipts from sales of other farm products partially offset the decline in grain and livestock production.

### Production by Industry

Seasonally adjusted real domestic product at factor cost, less agriculture, for the fourth quarter of 1965 was about 2 per cent higher than in the preceding quarter, and over 30 per cent above its first quarter 1961 level. More than two thirds of the aggregate gain in the fourth quarter came from manufacturing, trade, and electric power and gas utilities, with increases in all the other major components contributing the rest.

Manufacturing, with a 3 per cent gain, was the largest single contributor to the fourth quarter increase, accounting for about 40 per cent of the advance in non-agricultural real output. More than half of the gain in manufacturing came from durables which advanced by 4 per cent, while non-durables increased by  $2\frac{1}{2}$  per cent.

Within the durable manufacturing component, all major groups showed increases in the fourth quarter, ranging from 2 to  $7\frac{1}{2}$  per cent. The largest contributors to the gain in durables were wood products which advanced by  $7\frac{1}{2}$  per cent, and transportation equipment, up by  $4\frac{1}{2}$  per cent. The latter group owed the major part of its advance to continued strong gains in motor vehicles and parts production, which has more than doubled since the beginning of the current expansion. The electrical apparatus and non-ferrous metal groups recorded increases of more than 3 per cent, as did most of the components of the non-metallic minerals group.

Within non-durables manufacturing, increases were shown by all major groups except textiles and petroleum products. The 4 per cent gain in foods and beverages and the 5 per cent advance in chemical products jointly accounted for about two thirds of the increase in non-durable manufacturing. Gains of over 4 per cent were also recorded by printing and publishing, and tobacco products.

The next largest contributions to the gain in non-agricultural real output came from trade, which advanced by 2 per cent, electric power and gas utilities, up  $7\frac{1}{2}$  per cent, and construction, which recorded a  $3\frac{1}{2}$  per cent increase. Jointly they accounted for over one third of the aggregate gain. Within trade, the wholesale group showed a stronger increase than did retail trade, although gains were widespread among individual components of both groups. Motor vehicle dealers, grocery and clothing stores, fuel dealers, and farm implement and feed stores were among the retail trades showing the largest gains, while in wholesale trade, sales of commercial, institutional and industrial equipment and construction materials and supplies recorded the highest increases.

The other major industry groupings showed increases ranging from one half of one per cent in finance, insurance and real estate to 6 per cent in fishing and trapping. Fairly strong gains in air, water and railway transport accounted for most of the 2 per cent increase in transportation. In mining, the fourth quarter advances in metal and non-metal mining were dampened by a drop in the fuel mining component, resulting in an increase in the aggregate of over 1 per cent.

## LABOUR FORCE (More detail in Table 19)

Employment and total labour force were somewhat higher in March while unemployment declined; the unemployment rate was 3.3 per cent.

|      |   | total labour force | total employed | employed non-agriculture | unemployed | unemployment rate | not in the labour force |

## INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 1.0 per cent in February as all three major components of the index contributed to the gain; mining increased by 4.1%, electric power and gas utilities, 1.1% and manufacturing, 0.4%.

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits decreased in February particularly due to a sharp decline in the residential sector.

Housing starts were noticeably higher in March while completions fell off for the second consecutive month; units under construction gained appreciably in the period.

|        | value of building permits |                 |             | new dwelling construction, centres 5,000 and over |                    |                              |

## EXPORTS AND IMPORTS (More details in Tables 91 and 92)

Total exports rose in February reflecting increases to the United States and United Kingdom.  
Total imports declined slightly in January from the level of the previous month.

exports including re-exports (million dollars)

imports (million dollars)

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index declined fractionally in March reversing a 5-month increase.

The index of industrial common stocks moved back 2.6 per cent in March.

The consumer price index rose marginally in March reflecting small increases in durables, non-durables and in services; food prices were again higher.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

Table 7: national income and gross national product (million dollars)

| years and quarters                  | salaries, wages and supplementary labour income | military pay and allowances | corporation profits before taxes | deduct: dividends paid to non-residents | rent, interest and miscellaneous investment income | accrued net income of farm operators from farm production <sup>1</sup> | net income of non-farm unincorporated business | inventory valuation adjustment | net national income at factor cost | indirect taxes less subsidies | capital consumption allowances and miscellaneous valuation adjustments | gross national product at market prices <sup>2</sup> |

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. <sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.
